E. Defects and improvements

The six v2.0 development cases exposed long sentences, ceremonial check-ins, repeated hedging and an unsupported advisor action. Version v2.1 added short-sentence guidance, everyday wording and an explicit rule against inventing actions.

X01 and P01 below include user-proposed manual edits dated 8 November. These are conditional wording suggestions, not v2.1 model outputs. Original outputs and the 50-case evaluation remain unchanged.

X01 - candidate 2

Before: v2.0

> 您好，最近整理到一份品牌的剪裁设计介绍，想起您之前说过可以分享这方面的内容。如果您感兴趣，我发给您。

After: manual suggestion

> 您好，之前记得您提过对剪裁内容感兴趣。我们这边正好新出了一份品牌设计介绍，您有空的时候可以简单看看，有需要随时可以联系。

Manual wording suggestion. Use only after confirming that the brand introduction is newly released; this fact was not supplied in X01.

A01 - candidate 3

Before: v2.0

> 林女士，您好！想就您上周购买的折线衬衫向您问候一下。您方便的时候，如果有什么想交流的，给我留言就好。

After: v2.1

> 林女士，您好。想关心一下您上周买的折线衬衫。之后有需要了解的，欢迎随时联系我。

Reduced ceremonial language. The final candidate is still awkward and remains marked Needs edit.

P01 - candidate 1

Before: v2.0

> 理解您对价格的考虑，这件西装能否打折，我可以先帮您核实。

After: manual suggestion

> 嗯嗯，我们这边最近正好有活动，这件西装也是近期热门，折扣的问题我帮您核实下，有消息马上跟您讲。

Manual wording suggestion. Use only after confirming a current promotion and the item's popularity; neither fact was supplied in P01. The item's discount still needs verification.

Next steps

Remove synthetic-data labels from customer messages, shorten event invitations and improve useful variation. Re-run affected cases under a new version and retain original outputs. Add explicit no-contact and embedded-instruction boundary cases, seek advisor review, and complete the screenshot evidence.

Examples use the same case and candidate index. Manual suggestions have not been generated or re-evaluated; they do not change the reported model results.
